Comments on your submission

We decided to go with the pet date idea from the suggested ideas, we decided to use this one because it wasn't the simplest in our opinions to implement and it was something we could use for our github portfolio in the future. It was a lot of work, more than anticipated with all the back-end and front-end, with the back-end being especially arduous as it was a wake up call for us to really get PHP and Myql working with HTML. PHP proved to be the hardest of the three, since it was a first for most of us, which led to much trial and error. In the end, we gained valuable information on how to style and implement a working website, which will provide useful for our futures outside of CSUF

Fill out and print page and the next, and submit them on the day this project is due.
